Benefits of Aerobically Composted Soil Enhancers

Dave Thompson's Organic Healthy Grow[®] Soil Enhancers use only the highest quality, carefully sourced organic material to create the most effective and environmentally responsible products possible.

Benefits of Soil Enhancers

- Safe for people, pets and plants
- Helps improve moisture retention
- Aids in binding soil particle
- Increases nutrient retention
- Creates a healthier soil for plants to thrive

Dave Thompson's Organic Healthy Grow is made from the litter of healthy, egg-laying chickens and produced through a natural 45-day aerobic composting process, creating microbe rich compost with naturally high nitrogen and secondary nutrients, important to plant growth. We don't artificially heat our compost or use accelerants; we simply let nature run its course. This is important to Dave, because for him, "The Way It's Made Matters."[™]
