## Benefits of Aerobically Composted Specialty Mixes

Dave Thompson's Organic Healthy Grow® Specialty Mixes contain a blend of aerobically composted organic fertilizer and other high quality ingredients to produce colorful arrays of beautiful flowers and the lushest lawns possible.

### Benefits of Specialty Mixes

- Safe for people, pets and plants
- Easy to establish
- Low maintenance
- No accelerants and never artificially heated
- Fosters rich, healthy soil

Dave Thompson's Organic Healthy Grow® is made from the litter of healthy, egg-laying chickens and produced through a natural 45-day aerobic composting process, creating microbe rich compost with naturally high nitrogen and secondary nutrients, important to plant growth. We don't artificially heat our compost or use accelerants; we simply let nature run its course. This is important to Dave, because for him, "The Way It's Made Matters.™"
